Ewilan Rivière

Full-stack developer

Available in Rennes and elsewhere in remote

About me

Initially back-end oriented, I wanted to develop also in front-end when the user experience became important for me in the design of my projects. Then I started working on mobile development to discover a very different but equally interesting platform.

I enjoy having knowledge on every part of the chain, from local development to production.

I love discussing technologies, I'm interested in the latest versions of the languages I use and I spend a lot of time reading or making documentation.

I love discussing technologies, I'm interested in the latest versions of the languages I use and I spend a lot of time reading documentation or doing it.
